Hi Scott,

I don't think there will be an issue regarding our visibility at the public meeting. If there are any reporters there and they somehow determine that we are feds, we would obviously not be in a position to be interviewed, as I'm sure you know. Having said that, however, please feel free to do whatever you feel is necessary to keep a low profile. You may choose to not sign in, and if you feel more at ease without your uniform, you might consider wearing civilian clothes. Of course there are no guarantees, but I'm reasonably confident that we won't be put on the spot.

My assumption is that the facilities will provide any necessary personal protection equipment, such as hard hats and possibly shoe covers. We'll confirm this to be certain.

Good idea to meet for dinner or breakfast. I'll get back to you later in the week about this once my plans are confirmed.

Best,
Fred

Fred,
Are there any concerns about visibility/profile of the Feds who will be observing at the public meeting? Normally I would plan to attend in uniform, since I wear the uniform for everything.

Also, is there any required personal protection equipment we should plan to bring for the site visits?

I'll probably arrive at the Sacramento hotel late in the afternoon. We should plan to meet over dinner or breakfast, unless you have other commitments. If so, at least let me know where and what time to meet the group in the morning to go to the public meeting.

Regards,
Scott

Sounds good, Gina. Thanks for coordinating all of this.

Do you need the names of those of us who will be attending the expert panel meeting on the 8th?

Best,
Fred

Hi all,

Ex. 3 [CERCLA section 104(e)(7)(42 USC 9604(e)(7))]

Apologies, but it does appear to be the only reasonable meeting place in the area.
Perhaps we could aim to meet there at 9:30 for a brief round of introductions, prior to going to the site?
I don't think that those flying down from Sacramento can hope to get there before 9:30, but it seems like it would be
good for everyone to have a chance to briefly meet before we walk into the first tour.
Does this sound ok?

I think we will have 8 participants including at least 3 from our labs. We are just trying to finalize who from our program offices will attend.

Hi Jackie,

We just got confirmation from [redacted] They are willing to host a group of 15-16 people, so we should be able to accommodate a maximum of 8 EPA people on that visit as well.

We're now thinking it might work best to fit both visits into one day, with the following tentative schedule:

Fly into LAX (arrive close to 9:00 am)
Tour [redacted] from 10:00-11:00
Drive to [redacted] (about an hour, maybe 75 minutes)
Lunch
Tour [redacted] from 1:30-2:30 (or 2:00-3:00)
Fly out of Ontario at 4:00 or 5:00

Can you float that by people at your end and see if that might work, and how many you might have?

Best wishes

Thank you, Gina.

We look forward to hearing back from you on the number of people who can tour the 2nd facility. Once we know that and confirm that the 2nd tour will be the following day, we can figure out the full list of people who will attend.

Jackie

Subject: RE: Bulk tire crumb samples and facility tour

Hi Fred,

I checked with our folks. The maximum we could accommodate on the [redacted] tour would be 8 people from US EPA. We're still waiting to hear from [redacted] for confirmation, and we should then know more about how many people could go there.

The [redacted] tour will be on the afternoon of Feb 9th, so it appears that if we get to go to [redacted] it will be the next day. Since the [redacted] tour is in the afternoon, it might be possible for the US EPA folks to take an early flight out that morning and still get there in time for the tour.

On a different issue, we have determined that a pint-sized glass bottle will hold almost exactly 8 ounces of crumb rubber. So we will be using that to calculate the number of samples to collect. I'm looping in Annette so she knows that for lab purposes.

Best wishes

Sounds great, Gina. I suspect our folks will be interested in both types of samples. Will let you know.

You indicated that the facilities are willing to host up to about 15 people. Do you have an idea of how many openings there may be for us?

Fred

Hi Fred,

Thanks for checking in!

We are arranging visits to two facilities for Feb 9th, with a possible spillover to Feb 10th as follows:

Ex. 3 [CERCLA section 104(e)(7)(42 USC 9604(e)(7))]

The facilities are not all that close to each other, so it might be difficult to do both in one day. We plan to collect samples from both.

Several of us, including Lauren, Melanie, and me, will visit [REDACTED] only. Other OEHHA staff will go to both (if [REDACTED] OKs our visit) to collect samples. We are also checking if there will be any field installation in the [REDACTED] area during those 2 days, since it would be ideal to also observe (and sample) an installation. That would be weather-dependent, of course.

You can decide if you want samples from both facilities to address some of the variability in crumb rubber (e.g. size and size distribution), and if you want to visit one or both.

Also, we were just informed by [REDACTED] **Ex. 3 [CERCLA section 104(e)(7)(42 USC 9604(e)(7))]**

Ex. 3 [CERCLA section 104(e)(7)(42 USC 9604(e)(7))]

[REDACTED] Some turf installation companies choose to use one kind, while others use both. We are not sure if there is any difference in the physical and chemical properties of the crumb rubber generated under these different processes. OEHHA is planning to collect both types of sample, just in case. We expect you may be interested in sampling both as well.

We'll work with Jackie as we confirm the second facility, and she can send us a head count for one or both visits.

This should be interesting!

Gina,

Thanks again for the offer to join your team for the facility tour. I spoke recently with Melanie, who indicated that the best date for all of you is probably February 9 or 10. If you have a preference at this point, please let us know. This will help us gauge who will be able to join you. My rough guess at this point is that our number would be between two and six.

Best,
Fred

Hi all,

Happy new year!

We are looking at scheduling a tour of two large crumb rubber production facilities, one in Ex. 3 [CERCLA section 104(e)(7)(42 USC 9604(e)(7))] on February 9, 10, 11, or 12. The two tours could be done in one day.

Both facilities are happy to host up to a total of about 15 people.

Please let me know if people from US EPA would be interested in joining us and if any of those dates could work for you.

We will be trying to collect bulk samples prior to the tour, in the next couple of weeks, due to the tight timeline.

Best wishes

-Gina

Subject: Bulk tire crumb samples and facility tour

Hi all,

Thanks for the very informative call. It is helpful to be in communication, and I think there are several points of synergy that we identified yesterday. We're looking forward to working with you on this project. We have verified that we are able to obtain samples of fresh bulk turf and/or tire crumb in any quantity up to 10 lbs if we give 48 hours notice to a major manufacturer in Southern California. That same facility is willing to offer us a tour of their manufacturing operation, and we are planning to schedule that in January.

We are also working to develop a protocol for collecting freshly-manufactured material, so we will be prepared to collect some samples when we visit in January as well. They would be willing to provide multiple samples over time in order to help define the range of variability. For example, they would be willing to have us sample hourly over a single shift, or to have us sample daily over the course of a week. It would be very helpful to work with the U.S. EPA analytic chemists to help develop a protocol for collecting these samples. We would be happy to collect samples in triplicate (for OEHHA, US EPA, and NTP). We have some questions about appropriate sample containers (especially since the bulk samples might be fairly large).

We will work with Annette and her team on the protocol and sample containers, and we will keep all of you informed as we make the arrangements for the site visit to the facility.

Best wishes for the holiday!

-Gina
